

Fore Coffee Sales Performance Analysis

Operational Insights & Strategic Recommendations

* Muhammad Ridho Alfarid *

Background and Business Problem

Fore Coffee

A premium coffee startup with more than 300 outlets across Indonesia and Singapore. Fore Coffee offers comfortable outlets that are suitable for casual hangouts and work from cafe (WFC) activities, which have become a growing trend.

Business Problem

Management lacks comprehensive visibility into sales performance, including the highest revenue generating products, the most profitable sales channels, and opportunities to optimize operational hours.

Business Questions

Q1 : Product

Which menu items contribute the highest and lowest revenue?

Q2: Sales Channel

Which sales channel is the most efficient in terms of revenue and commission costs?

Q3 : Operational Hours

How is Fore Coffee's daily transaction load distributed?

Dataset

Daily Transactions:

- 16,315 Transactions
- Jan 2025 – Mar 2026

Menu Master:

- 34 Menu Items
- 7 Categories

Outlet Master:

- 346 Outlets
- 31 Regions

Performance Overview

Total Revenue Rp877.80M	Total Transactions 16,315	Average Order Value Rp53.80K	Active Outlets 346
-----------------------------------	-------------------------------------	--	------------------------------

Top 5 Regions by Revenue

Bottom 5 Regions by Revenue

Monthly Revenue and Transaction Volume

Key Observation:

Revenue remained stable over the 15-month period. This indicates that there was no significant growth.

Product Analysis

Insight

18 out of 34 menu items collectively generate 80% of total revenue, with Iced Aren Latte and Iced Butterscotch Sea Salt Latte alone contributing 28.5%. Menu items in the long-tail segment risk burdening inventory costs and reducing overall outlet operational efficiency.

Sales Channel Analysis

Rank	Channel	Share	Revenue
1	Dine In	33,8%	Rp297.004.000,00
2	Pick Up App	25,5%	Rp223.991.000,00
3	GrabFood	18,5%	Rp162.752.000,00
4	GoFood	12%	Rp105.107.000,00
5	ShopeeFood	7,1%	Rp61.937.000,00
6	Walk In Take Away	3,1%	Rp27.004.000,00

Finding

Dine In and Pick Up App contributed 59.3% of total revenue. This indicates that the majority of the business still operates without dependency on third party platforms.

Risk

GrabFood, GoFood, and ShopeeFood contributed 37.6% of total revenue. This figure does not account for platform commissions, which are estimated at around 20% of transaction value. Fore Coffee has the potential to lose Rp53M per year from platform commissions alone.

Operational Hours Analysis

Insight

- **Peak Hours:** Transactions increase in the morning before working hours and during lunch time, which requires strong operational readiness.
- **Lifestyle Trend** The high transaction volume on Sunday mornings is driven by the post workout coffee trend.

Recommendations

Product

1

Bundle menu items that contribute only 20% of total revenue (long-tail menu). If there is no improvement within 6 months, discontinuation is recommended to simplify operations.

Sales Channel

2

Provide exclusive incentives for internal app users, such as loyalty points, cashback, and free size upgrades that are not available on third-party platforms. The target is to increase Pick Up App contribution from 25.5% to 30% within 6 months.

Operational Hours

3

Implement limited-time bundling promotions from 19:00 to 21:00. Combine these promotions with long-tail menu items as bundling components to increase sales.
